

AMENDMENT

Please amend the above-identified application as follows:

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for identifying a particular caller, said method comprising:

detecting a voice utterance at an origin device, the origin device further comprising a telephony device utilized for origination of a call;

identifying a caller identity associated with said voice utterance at said origin device, such that said caller identity is transmittable as an authenticated identity of said caller for a call; and

prompting said caller to enter an additional biometric input to verify said caller identity, wherein said biometric input comprises at least one from among an eye print, a finger print, and a body heat scan.
2. (Original) The method for identifying a particular caller according to claim 1, further comprising:

prompting said caller to provide said voice utterance.
3. (Cancelled).

4. (Original) The method for identifying a particular caller according to claim 1, wherein identifying a caller identity further comprises:

extracting speech characteristics from said voice utterance; and

comparing said speech characteristics with a plurality of voice samples stored for identifying a plurality of callers.
5. (Original) The method for identifying a particular caller according to claim 1, further comprising:

transmitting said voice utterance to a third party device via a network; and

receiving said caller identity from said third party device.
6. (Original) The method for identifying a particular caller according to claim 1, further comprising:

requesting a voice sample for said particular caller from a third party device accessible via a network; and

receiving said voice sample for said particular caller for enabling authenticating of said caller identity.
7. (Original) The method for identifying a particular caller according to claim 1, further comprising:

initiating a call from said origin device to an intermediary device; and

forwarding said caller identity with said call initiation to said intermediary device, wherein said intermediary device is enabled to forward said caller identity to a destination device to process said call.

8. (Original) The method for identifying a particular caller according to claim 1, wherein said origin device is a call center.
9. (Original) The method for identifying a particular caller according to claim 1, wherein said origin device is a private exchange network.
10. (Previously Cancelled).
11. (Original) The method for identifying a particular caller according to claim 1, wherein said caller identity comprises at least one from among a caller name, a caller location, a subject of said call, and a device identification.
12. (Currently Amended) A system for identifying a particular caller, said system comprising:

an origin telephony device, the origin telephony device further comprising a telephony device utilized for origination of a call;

means for detecting a voice utterance at said origin telephony device;

means for identifying a caller identity associated with said voice utterance at said origin telephony device, such that said caller identity is transmittable as an authenticated identity of said caller for a call; and

means for prompting said caller to enter an additional biometric input to verify said caller identity, wherein said biometric input comprises at least one from among an eye print, a finger print, and a body heat scan.

13. (Original) The system for identifying a particular caller according to claim 12,
further comprising:

means for prompting said caller to provide said voice utterance.
14. (Cancelled).
15. (Original) The system for identifying a particular caller according to claim 12,
wherein said means for identifying a caller identity further comprises:

means for extracting speech characteristics from said voice utterance; and

means for comparing said speech characteristics with a plurality of voice samples
stored for identifying a plurality of callers.
16. (Original) The system for identifying a particular caller according to claim 12,
further comprising:

means for transmitting said voice utterance to a third party device via a network;
and

means for receiving said caller identity from said third party device.
17. (Original) The system for identifying a particular caller according to claim 12,
further comprising:

means for requesting a voice sample for said particular caller from a third party
device accessible via a network; and

means for receiving said voice sample for said particular caller for enabling authenticating of said caller identity.

18. (Original) The system for identifying a particular caller according to claim 12, further comprising:

means for initiating a call from said origin telephony device to an intermediary telephony device; and

means for forwarding said caller identity with said call initiation to said intermediary telephony device, wherein said intermediary telephony device is enabled to forward said caller identity to a destination telephony device in processing said call.

19. (Original) The system for identifying a particular caller according to claim 12, wherein said origin telephony device is a call center.

20. (Original) The system for identifying a particular caller according to claim 12, wherein said origin telephony device is a private exchange network.

21. (Original) The system for identifying a particular caller according to claim 12, wherein said origin device is an individual telephone.

22. (Original) The system for identifying a particular caller according to claim 12, wherein said origin device is a computer system communicatively connected to a network enabled for voice communications.

23. (Original) The system for identifying a particular caller according to claim 12, wherein said caller identity comprises at least one from among a caller name, a caller location, a subject of said call, and a device identification.

24. (Currently Amended) A computer program product for identifying a particular caller, said computer program product comprising:

a recording medium;

means, recorded on said recording medium, for detecting a voice utterance at an origin telephony device, the origin telephony device further comprising a telephony device utilized for origination of a call;

means, recorded on said recording medium, for authenticating a caller identity associated with said voice utterance at said origin telephony device; and

means, recorded on said recording medium, for prompting said caller to enter an additional biometric input to verify said caller identity, wherein said biometric input comprises at least one from among an eye print, a finger print, and a body heat scan.

25. (Original) The computer program product for identifying a particular caller according to claim 24, further comprising:

means, recorded on said recording medium, for prompting said caller to provide said voice utterance.

26. (Cancelled).

27. (Original) The computer program product for identifying a particular caller according to claim 24, further comprising:

means, recorded on said recording medium, for extracting speech characteristics from said voice utterance; and

means, recorded on said recording medium, for comparing said speech characteristics with a plurality of voice samples stored for identifying a plurality of callers.

28. (Original) The computer program product for identifying a particular caller according to claim 24, further comprising:

means, recorded on said recording medium, for transmitting said voice utterance to a third party device via a network; and

means, recorded on said recording medium, for receiving said caller identity from said third party device.

29. (Original) The computer program product for identifying a particular caller according to claim 24, further comprising:

means, recorded on said recording medium, for requesting a voice sample for said particular caller from a third party device accessible via a network; and

means, recorded on said recording medium, for receiving said voice sample for said particular caller for enabling authenticating of said caller identity.

30. (Original) The computer program product for identifying a particular caller according to claim 24, further comprising:

means, recorded on said recording medium, for initiating a call from said origin telephony device to an intermediary telephony device; and

means, recorded on said recording medium, for forwarding said caller identity with said call initiation to said intermediary telephony device, wherein said

intermediary telephony device is enabled to forward said caller identity to a destination telephony device in processing said call.

31. (Cancelled).

32. (Cancelled).

Claims 33 – 35 (Previously Cancelled).

36. (Currently Amended) A method for caller identification, comprising:

detecting a call request at an origin device, the origin telephony device further comprising a telephony device utilized for origination of a call;

detecting a voice utterance at said origin device from a caller;

accessing a third party system for a voice imprint corresponding to said voice utterance;

authenticating, at the origin device, an identity of said caller identified in said voice imprint by matching said accessed voice imprint with said voice utterance;
and

prompting said caller to enter an additional biometric input to verify said caller identity, wherein said biometric input comprises at least one from among an eye print, a finger print, and a body heat scan.
